Marine Anthropogenic Litter Sep 23 2019 This book describes how
man-made litter, primarily plastic, has spread into the remotest parts of
the oceans and covers all aspects of this pollution problem from the
impacts on wildlife and human health to socio-economic and political
issues. Marine litter is a prime threat to marine wildlife, habitats and
food webs worldwide. The book illustrates how advanced technologies
from deep-sea research, microbiology and mathematic modelling as well
as classic beach litter counts by volunteers contributed to the broad
awareness of marine litter as a problem of global significance. The
authors summarise more than five decades of marine litter research,
which receives growing attention after the recent discovery of great
oceanic garbage patches and the ubiquity of microscopic plastic particles
in marine organisms and habitats. In 16 chapters, authors from all over
the world have created a universal view on the diverse field of marine
litter pollution, the biological impacts, dedicated research activities, and
the various national and international legislative efforts to combat this

environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists, and it provides a solid knowledge base for policy makers, NGOs, and the broader public.

Novel Biomarkers in Alzheimer's Disease Jun 20 2019 Alzheimer's

disease (AD) represents the most common form of dementia in the

elderly population worldwide. AD is characterized by progressive

neurodegeneration that leads to a gradual deterioration of memory and

other cognitive functions. Given the global prevalence and impact of

AD, there is a critical need to establish biomarkers that can be used to

detect AD in individuals before the onset of clinical signs and provide

mitigating therapeutics. The aim of this Special Issue is to discuss the

current knowledge as well as future perspectives on the role of

biomarkers in the screening, diagnosis, treatment and follow-up of AD.
