The European Rescue of the Franco Regime, 1950-1975 Apr 27 2022 *The European Rescue of the Franco Regime, 1950-1975* explores how the governments of the founding members of the

European Coal and Steel Community and the European Economic Community, acting collectively via the European Communities, assisted in the consolidation of the Franco regime. It explains how the Six (the Nine after 1972) implemented a set of policy measures that facilitated the subsistence of the Franco regime, proving that trade with the Six improved Spain's overall economic performance, which in turn secured Franco's rule. The Six provided the Spanish economy with a stable supply of essential raw materials and capital goods and with outlet markets for the country's main export commodities. Through these mechanisms the European Communities assisted Spanish economic development and supported the stabilization of the non-democratic political regime ruling Spain. The Franco regime was never threatened by European integration and the Six/Nine managed to isolate meaningful Community negotiations with Spain from mounting political disturbance. The European Rescue of the Franco Regime, 1950-1975 shows that without unremitting material assistance from Western Europe, it would have been considerably more challenging for the Franco regime to attain the stability that enabled the dictator to maintain his rule until he died peacefully at 82 years old.

Savanna Woody Plants and Large Herbivores Nov 03 2022 Insights on current research and recent developments in understanding global savanna systems Increasingly recognized as synonymous with tropical grassy biomes, savannas are found in tropical and sub-tropical climates as well as warm, temperate regions of North America. *Savanna Woody Plants and Large Herbivores* examines the interactions between woody plants and browsing mammals in global savannas—focusing primarily on the C4 grassy ecosystems with woody components that constitute the majority of global savannas—and discusses contemporary savanna management models and applications. This much-needed addition to current research examines topics including the varying behavior of browsing mammals, the response to browsing by woody species, and the factors that inhibit forage intake. Contributions from an international team of active researchers and experts compare and contrast different savanna ecosystems, offering a global perspective on savanna functioning, the roles of soil and climate in resource availability and organism interaction, and the possible impacts of climate change across global savannas. Fills a gap in literature on savanna management issues, including biodiversity conservation and animal production Applies concepts developed in other biomes to future savanna research Complements contemporary books on savanna or large herbivore ecology Focuses on the woody component of savanna ecosystems and large herbivore interactions in savannas Compares tree-mammal systems of savannas and other eco-systems of temperate and boreal regions Provides numerous case studies of plant-mammal interactions from various savanna ecosystems *Savanna Woody Plants and Large Herbivores* is a valuable addition to those in fields such as ecology, wildlife and conservation biology, natural resource management, and environmental science.
