Applied Photographic Optics Feb 19 2022 Selected by the American Library Association's 'Choice' magazine as "best technical book", the first edition of this book soon established itself as the standard reference work on all aspects of photographic lenses and associated optical systems. This is unsurprising, as Sidney Ray provides a complete, comprehensive reference source for anyone wanting information on photographic lenses, from the student to the practitioner or specialist working with visual and digital media worldwide. This third edition has been fully revised and expanded to include the rapid progress in the last decade in optical technology and advances in relevant electronic and digital forms of imaging. Every chapter has been revised and expanded using new figures and photographs as appropriate, as well as extended bibliographies. New chapters include details of filters, measurements from images and the optical systems of digital cameras. Details of

electronic and digital imaging have been integrated throughout. More information is given on topics such as aspherics, diffractive optics, ED glasses, image stabilization, optical technology, video projection and new types of lenses. A selection of the contents includes chapters on: optical theory, aberrations, auto focus, lens testing, depth of field, development of photographic lenses, general properties of lenses, wide-angle lenses, telephoto lenses, video lenses, viewfinder systems, camera movements, projection systems and 3-D systems.

Visualization in Scientific Computing Apr 21 2022 Visualization is the most important approach to extract relevant information from the huge amount of data produced in today ' s computational and experimental sciences. Selected contributions from the fifth in a well established series of workshops on "Visualization in Scientific Computing " , organized by the EUROGRAPHICS Association, held at May 30 to June 1, 1994, in Rostock, Germany, treat topics of particular interest in current research: visualization of multidimensional data, flow visualization, data modeling, time control, interaction, and volume visualization. Examples of applications for instance come from flow simulation, chemistry, medical imaging, and geography. Readers will profit in getting insight in state-of-the-art techniques which might help them to solve their visualization problems.
