Based on this notion, information on such phenomena is supposedly crucial for existing and potential capital providers in making decisions whether to allocate resources to a company. This thesis examines the information use and needs of financial analysts with respect to intangible values. The purpose is to shed light on the usefulness of such information from the perspective of one of the primary user groups of IFRSs.

Inside Accounting
Jun 09 2020 Based on a study covering a one-year financial reporting cycle at a commercial subsidiary of a well-known scientific research organization, Inside Accounting examines how accountants and non-accounting managers construct their company's earnings. Addressing issues in both internal management accounting, such as budgeting, performance evaluation, and control, as well as external financial accounting, such as book keeping, monthly/year end accounts and auditing, David Leung focuses on how people classify transactions, make professional judgments and use computer software for accounting, and prepare for and facilitate the auditing process. He also looks at accountancy training and the impact of people's affiliations to the accounting profession or other professions on their accounting and on their perceptions of financial statements. Other contingent or contextual factors that influence the choice of accounting method, such as time pressure, reward structures, management authority and institutions are also considered. David Leung's research employs an innovative blend of theory and practice that redresses the imbalance between ethnographic studies of financial accounting, and management accounting and helps close the gap between the academic curriculum and the experiences of practitioners. His research leads the author to conclude that no act of accounting classification is ever indefeasibly correct; that the accounting community institutions and authority are central to the accounting process and to the 'truth and fairness' of accounting numbers; that accounting training involves extensive use of learning by doing; that both accountants and non-accounting managers have goals and interests that often result in no better than 'good enough' accounting. This book will appeal to accounting and financial professionals and academics in finance, as well as to sociologists and academic researchers interested in research methods and science studies.

MAY Formerly senior partner, Price, Waterhouse Co., Certified Public Accountants lecturer at the Graduate School of Business Administration, Harvard University NEW YORK THE MACMILLAN COMPANY 1946 THE MACMILLAN COMPANY. All rights reserved no part of this book may be reproduced in any form without permission in writing from the publisher, except by a reviewer who wishes to quote brief passages in connection with

review written for inclusion in magazine or newspaper. Reprinted December, 1947 Reprinted May, 1949 PRINTED IN THE UNITED STATES OF A1CVUCA In this volume the American Institute of Account ants is commonly referred to as the Institute, the American Accounting Association as the Associa tion, and the National Association of Railroad and Utilities Commissioners as the NARUC. Foreword FINANCIAL ACCOUNTING is now generally recognized as being primarily historical in character and as having for its most important function the extraction and presentation of the essence of the financial experience of businesses, so that decisions affecting the present and the future may be taken in the light of the past. The rule of accounting, even more than those of law, are the product of experience rather than of logic. Similarly, this book is an attempt to extract and present the essence of an experience in financial accounting in the hope that it may be helpful to those called upon to deal with the problems of the future. It is not the result of a study and appraisal of authorities, and the views that are expressed are those of its author alone indeed, publication has been delayed until formal ties and official positions which might have been deemed, to imply more than a personal responsibility for them have been relinquished. In part, it is based on lectures delivered at the Graduate School of Business Administration of Harvard University and papers written for other purposes since 1936. A few passages have been reproduced from the volume which those who were then partners, with generous insight, prepared in that year to mark the twenty-fifth anniversary of the authors assumption of senior partnership. The writing of such a book seemed to be justified by the fact that the experience on which it is based extended over a period of exceptional interest and was enriched by close association with men of eminence here and abroad, not only viii FOREWORD in accounting but in government, business, finance, law, and economics. The obligation owed to those who have contributed to that experience is great, but can be expressed to them here only collectively. Grateful recognition must, however, be given to the guidance, friendship, and inspiration of Arthur Lowes Dickinson, who by his abilities, his writings, and above all, by his example, earned an outstanding place among the independent accountants of America, to whom this book is gratefully dedicated. Solvency in Financial Accounting Jul 31 2019 This book examines the notion of solvency at law and in accounting; and reveals inconsistent ways of determining solvency therein. Solvency is a critical commercial financial attribute. Quantifying solvency has been of concern to many across time, particularly with regard to business continuity. This study demonstrates that conventional financial statements are deficient in establishing the financial state of an entity, and equally lacking in quantifying its state of solvency. The book contributes to the literature by drawing on real-world observations of how the meshing of commercial and legal foundations creates the environment in which accounting must serve. The aim of this work is to provide insights into what changes to existing financial reporting systems might assist business in mitigating unexpected business failures and the criticism of accounting in the aftermath. Drawn mainly on major Australian cases, links highlight associations between the language of accounting and the data in financial statements; and situations that may be generalised - that have international significance. Hence, this work is relevant to the interests of a wide range of readers. It is also important from a public policy perspective as regulators grapple with a commercial environment heavily influenced by sometimes perceived scandalous corporate activity. Solvency is a topical and ongoing issue for business and financial accounting.
