CCNA Jun 21 2021 Network engineers that want to advance their careers or learn more about the Cisco technology they are working with should invest in a Cisco certification. As a Cisco Certified professional, a person is armed with all the knowledge they need to succeed in their chosen area of expertise. The certification is globally recognized and sought after by major corporations, especially in today's ever-evolving world of IT technology. Cisco ensures that its certified network professionals are kept up to date with the latest technologies and trends. Obtaining a Cisco Certification validates that the IT professionals are dedicated to their career, it opens up new career paths, and may move them into a higher salary bracket. Cisco Certified professionals are in demand worldwide and that demand is increasing with the rapid technology development growth. They are also among the top-paying jobs in the world! If you are an IT professional wanting to further your career as a Cisco Certified professional, then it all starts with the new Cisco Certified Network Associate (CCNA) qualification. Recently, Cisco announced that they were revamping their certifications. They want to ensure their courses include all the latest technological innovations that pertain to their industry sector. On 23 February 2020 Cisco will be launching its new courses that affect each level of certification, from entry-level to architect level. They have retired some of their courses in an effort to streamline the certification path. Before, the CCNA consisted of multiple courses and exams, one for each network path, such as CCNA Cloud, CCNA Routing and Switching, CCNA Security. This meant three different courses and three different exams. The new CCNA replaces these individual CCNA courses and exams, which means one course covering a broader spectrum of IT fundamentals. It also means the IT professional only has to sit one exam to obtain their certificate! This book is a guide to help you discover the new Cisco Certified Network Associate (CCNA) certificate. It covers the new layout of the 200-301 CCNA exam topics plus a helpful guide on what to expect from the exam. The book will help you understand the networking fundamentals you will need to know in order to pass the new CCNA certification exam. It is the ideal book for those that are just starting out in their network engineering career and aspiring to become Cisco certified. It is also a book for anyone who is struggling with their CCNA exam, wants to know what to expect from the new 200-301 CCNA certification, and those that need a refresher on various network fundamentals. In order to learn and know more about this subject, Grab this book Now!

"I just don't know where to start studying. I feel overwhelmed by the information." "I've bought all the CBT-style videos and books, and have even been on a course, but I don't feel ready to take the exam and I don't know if I ever will." "I've been studying for a long time now, but I haven't booked the exam yet because I just don't feel ready." For every ten students who start out towards the CCNA qualification, nine quit. They don't quit because of laziness but because they became overwhelmed with information and didn't even know where to start. They sat down to study from one of the 'big name' manuals and half an hour later found themselves staring blankly at the same page. Can you imagine how frustrating that feels? You see, most authors throw you in at the deep end and expect you to get on with it. They forget that you have a full-time job, a long journey back home, family commitments and any number of challenges going on in your life. The last thing you have time for is to write out a detailed study plan with plenty of review sessions. If only somebody could tell you what to study each day, every day. If only you could open your study guide and see which bit of theory to read, which lab to do and which exam to take. You could then get on with the task of studying and getting that exam nailed. This is where Cisco CCNA in 60 Days comes in. Written in response to feedback from thousands of students using my online CCNA in 60 days program, my classroom courses and my other online Cisco training websites this book is the final piece in the studying puzzle. HOW IT WORKS Every day you read your theory module, you review yesterdays lesson, do a lab and then answer some review questions. The next day you do the same until you reach the review sessions where you cement all your knowledge with more labs and review as well as some practice exams. If that wasn't enough, you have a cram guide to read daily and an online Subnetting review site to really hone your subnetting skills. At the 30 day mark you can take your CCENT exam and move into your ICND2 study sessions

or just take your CCNA exam at the end of 60 days. If you fall behind no problem, just pick up where you left off. WHAT'S COVERED? Every subject Cisco want you to know for your exams is covered with labs, theory, exams, reviews and crams. From RIP to OSPF, from VLSM to CIDR, IPv4 to IPv6, STP to CDP. Every exam topic is covered in detail many times over. Just when you think you are ready you are hit with challenge labs and more exams to ensure you are more than ready for the tricky Cisco exams. There are over 60 hand-on labs in total to help you build your configuration skills and confidence. ABOUT THE AUTHORS Paul Browning used to work at Cisco TAC but left in 2002 to start his own Cisco training company. He has authored several Cisco manuals as well as created one of the biggest online Cisco training websites used by many thousands of students. Farai Tafa is a dual CCIE who consults for large blue chip companies in the USA. Daniel Gheorghie is a CCIE in Routing and Switching.
