Dusk to Dawn Sep 02 2020 "In the past, landscape photography largely ended when the last light of dusk faded from the sky. Today it's only beginning. The latest digital cameras have made it easy to create images of the landscape at night that film and early digital photographers could only dream of. Equipped with off-the-shelf cameras, more and more photographers are venturing into the night, far beyond the comforting glow of city lights, and returning with spectacular images of places both familiar and unknown that are unlike anything seen before. [This book] is your guide to this new photographic world. In it, photographer Glenn Randall ... teaches you how to plan, shoot, and process professional-quality images of the Milky Way, the aurora, lunar eclipses, meteor showers, star trails, and landscapes lit solely by moonlight. Throughout the book, Randall emphasizes ways to integrate beautiful depictions of the night sky with equally compelling renditions of the land below to create complete landscape images that evoke a sense of place--and a sense of wonder. Equipped with the knowledge in this book, readers will be prepared to create their own nocturnal masterpieces."--Dust jacket.

Photo-guide to the Constellations May 22 2022 "I hope that people all around the world never forget what a wonderful thing it is to lie on your back and look up at the stars" Pete Seeger What is the fascination that constellations hold for people? There are probably as many different answers to that question as there are people. For many, though, the constellations are the stepping-off point into the fabulous, mind-bending discoveries and concepts of modern astronomy. For others it is their long and intriguing history that beckons. For some people the constellations provide the means for navigation and orientation over the surface of the Earth, and of course there are the millions who place some faith in horo scopes. But for most people the patterns in the sky are a beautiful part of their environment to be treasured alongside the forests, fields and rivers that make life worth living. However just as we are losing our green environment to pollution, so we are losing our sky. The glow from cities across the world swamps the stars in the night sky. Astronomers have had to retreat to remote mountain tops to escape that light pollution. The rest of us must make do with what is available. From the centre of a city, or any other brightly lit area, probably no stars at all will be visible even on the clearest of nights. From the suburbs, the brighter stars should normally be seen.

Photo-Graphics: Exposure Jul 12 2021 One of the most over-used, yet misunderstood pieces of photographic equipment is the flash unit in its many forms. While a flash unit - either built in to the camera or a separate device - offers the advantage of adding light to your images, its biggest disadvantage is the complex nature of the flash, which prevents many from using it to its full potential. Seeking an understanding of the nomenclature, the buttons and dials on the flash itself, and the menus inside is akin to trying to learn a foreign language. What is FEC? What does TTL mean and how is it used effectively? What is high-speed synchronisation? How can the less technically gifted photographer understand the complexities of such systems and put them to effective use in the field? Studying a manual full of technical jargon is a daunting task and just as confusing as the flash itself. Professional photographer Robert Harrington takes the confusion out of the subject of photographic lighting, and offers invaluable guidance and expert tips that will benefit all keen photographers. Jargon-free text explains: * basics of flash, both on- and off-camera * how to utilise direct and bounce flash * the basics of off-camera flash * how to take great portraits with a single Speedlight * the use of off-camera flash modifiers, such as softboxes and grids * the creative employment of Speedlights, including use outdoors. AUTHOR: Bob Harrington is an accomplished headshot and editorial photographer based in Milford, CT, and whose work has appeared in numerous magazines and on web sites. He also specialises in flash and off camera flash photography, teaching OCF to anyone who will listen across the United States. His love of photography and helping others forward their photographic vision has led to a successful career in this expanding field.
